CSS و HTML

Anatomy of an HTML element

The diagram shows an HTML element `<p class="editor-note">My cat is very grumpy</p>` on a light gray background. A bracket above the `class="editor-note"` part is labeled "Attribute". The text is color-coded: `<p` is yellow, `class="editor-note"` is blue, `>` is yellow, and `</p>` is yellow.

- Attributes that set a value always have:
 - *A space between it and the element name (or the previous attribute, if the element already has one or more attributes).*
 - *The attribute name followed by an equal sign.*
 - *The attribute value wrapped by opening and closing quotation marks.*

HTML Headings

- H1

Lists

- `ul`: unordered list
- `ol`: ordered list
- `li`: list item

The screenshot shows a web browser window with the address bar at `localhost:3000/0`. The browser displays two lists. The first is an unordered list with four items, each preceded by a black dot. The second is an ordered list with four items, each preceded by a number. The HTML code for these lists is visible in the background, showing the use of `ul`, `li`, and `ol` tags.

```
<? index.html X
www > 01 > <? index.html > html > body > ul
2
8 <body>
9   <ul>
10     <li>Unordered Item 1</li>
11     <li>Unordered Item 2</li>
12     <li>Unordered Item 3</li>
13     <li>Unordered Item 4</li>
14   </ul>
15   <ol>
16     <li>Unordered Item 1</li>
17     <li>Unordered Item 2</li>
18     <li>Unordered Item 3</li>
19     <li>Unordered Item 4</li>
20   </ol>
21 </body>
22
```

- Unordered Item 1
- Unordered Item 2
- Unordered Item 3
- Unordered Item 4

1. Unordered Item 1
2. Unordered Item 2
3. Unordered Item 3
4. Unordered Item 4

Lists - nested

```
index.html > html > body > ul > li > ul > li > ol > li
2
8  <body>
9  <ul>
10     <li>Unordered Item 1</li>
11     <li>Unordered Item 2
12         <ul>
13             <li>Sub Item</li>
14             <li>Sub Item
15                 <ol>
16                     <li>Item 1</li>
17                     <li>Item 2</li>
18                 </ol>
19             </li>
20         </ul>
21     </li>
22     <li>Unordered Item 3</li>
23     <li>Unordered Item 4</li>
24 </ul>
25 </body>
26
```

- Unordered Item 1
- Unordered Item 2
 - Sub Item
 - Sub Item
 - 1. Item 1
 - 2. Item 2
- Unordered Item 3
- Unordered Item 4

CSS

Styling

- style-name: style-value
- separated with ;
- font-size:30px;color:red

Styling

- html style attribute: inline styling
- Styling with css selector

CSS Text Styling

CSS Selectors

- Type selector
- Class selector
- ID Selector
- Type and class selector
- Multiple selectors with comma
- Universal selector *

CSS Selectors

- Descendant combinator (space)
 - *The descendant combinator — typically represented by a single space (" ") character — combines two selectors such that elements matched by the second selector are selected if they have an ancestor (parent, parent's parent, parent's parent's parent, etc.) element matching the first selector. Selectors that utilize a descendant combinator are called descendant selectors.*

CSS Selectors

■ Child combinator >

- *The child combinator (>) is placed between two CSS selectors. It matches only those elements matched by the second selector that are the direct children of elements matched by the first.*

CSS Selectors

- Next-sibling combinator +
 - *The next-sibling combinator (+) separates two selectors and matches the second element only if it immediately follows the first element, and both are children of the same parent element.*
- Subsequent-sibling combinator ~
 - *The subsequent-sibling combinator (~, a tilde) separates two selectors and matches all instances of the second element that follow the first element (not necessarily immediately) and share the same parent element.*

CSS Attribute Selectors

Selector	Example	Description
<code>[*attr*]</code>	<code>a[title]</code>	Matches elements with an <i>attr</i> attribute (whose name is the value in square brackets).
<code>[*attr*=*value*]</code>	<code>a[href="https://example.com"]</code>	Matches elements with an <i>attr</i> attribute whose value is exactly <i>value</i> — the string inside the quotes.
<code>[*attr*~=*value*]</code>	<code>p[class~="special"]</code>	Matches elements with an <i>attr</i> attribute whose value is exactly <i>value</i> , or contains <i>value</i> in its (space-separated) list of values.
<code>[*attr* =*value*]</code>	<code>div[lang ="zh"]</code>	Matches elements with an <i>attr</i> attribute whose value is exactly <i>value</i> or begins with <i>value</i> immediately followed by a hyphen.

CSS Attribute Selectors

Selector	Example	Description
<code>[attr^=value]</code>	<code>li[class^="box-"]</code>	Matches elements with an <i>attr</i> attribute, whose value begins with <i>value</i> .
<code>[attr\$=value]</code>	<code>li[class\$="-box"]</code>	Matches elements with an <i>attr</i> attribute whose value ends with <i>value</i> .
<code>[attr*=value]</code>	<code>li[class*="box"]</code>	Matches elements with an <i>attr</i> attribute whose value contains <i>value</i> anywhere within the string.

روش‌های اضافه کردن CSS به سند

- نوشتن inline با استفاده از style attribute
- استفاده از تگ style
- استفاده از تگ link برای استایل خارجی

Styling HTML elements

Styling based on Class

Styling based on Location in a document

Styling based on state

استایل دهی های کلی

Font-family

- The font-family property specifies a list of fonts, from highest priority to lowest. Font selection does not stop at the first font in the list that is on the user's system. Rather, font selection is done one character at a time.

```
/* A font family name and a generic family name */  
font-family: "Gill Sans Extrabold", sans-serif;  
font-family: "Goudy Bookletter 1911", sans-serif;  
  
/* A generic family name only */  
font-family: serif;  
font-family: sans-serif;  
font-family: monospace;
```

Font-size

```
/* <absolute-size> values */
```

```
font-size: xx-small;
```

```
font-size: x-small;
```

```
font-size: small;
```

```
font-size: medium;
```

```
font-size: large;
```

```
font-size: x-large;
```

```
font-size: xx-large;
```

```
font-size: xxx-large;
```

```
/* <relative-size> values */
```

```
font-size: smaller;
```

```
font-size: larger;
```

```
/* <length> values */
```

```
font-size: 12px;
```

```
font-size: 0.8em;
```

```
/* <percentage> values */
```

```
font-size: 80%;
```

Color

```
color: rebeccapurple;
```

```
color: #00a400;
```

```
color: rgb(214, 122, 127);
```

```
color: hsl(30deg 82% 43%);
```

```
color: hsla(237deg 74% 33% / 61%);
```

```
color: hwb(152deg 0% 58% / 70%);
```
